

SUPPLEMENTAL MATERIAL

Table S1. Frequency of mechanisms of very late drug-eluting stent thrombosis, grouped by the usage of dual antiplatelet therapy (DAPT)

	DAPT at the time of stent thrombosis		p
	Yes (n=21)	No (n=77)	
Mechanisms			0.729
Stent malapposition or evagination	9 (42.9)	27 (35.1)	
Uncovered struts without stent malapposition/evagination	6 (28.6)	18 (23.4)	
Neoatherosclerosis	6 (28.6)	28 (36.4)	
Erosive neointima without neoatherosclerosis	0 (0)	4 (5.2)	

Data are presented as number (%).

Figure S1. The annual frequency of patients with very late drug-eluting stent (DES) thrombosis
